

SUPERVISION REQUIREMENTS POLICY

GENERAL SUPERVISION

UT-PIC recognizes the rights of interns and faculty to be treated with courtesy and respect. To maximize the quality and effectiveness of the interns' learning experiences, all interactions among interns, training supervisors, and faculty/staff are collegial and conducted in a manner that reflects the highest standards of the profession. UT-PIC faculty inform interns of these principles and of their avenues of recourse should problems arise through policies that are available at <https://ut-pic.org/> and in the UT-PIC Intern Orientation Manual.

UT-PIC faculty regularly schedule supervision and are accessible for consultation to interns when they are providing clinical services. UT-PIC faculty provide interns with a level of observation, guidance and supervision that encourages successful completion of the internship. Faculty serve as professional role models and engage in actions that promote interns' acquisition of knowledge, skills, and competencies consistent with the UT-PIC's training aims.

One licensed psychologist serves as primary clinical supervisor for each intern. Interns receive a minimum of two (2) hours of in-person individual supervision each week from a licensed psychologist. Supplemental weekly individual supervision may be provided by other appropriately credentialed professionals at the training site. Weekly group supervision will be required and conducted with all interns across consortium sites via distance technology. Group supervision may focus on legal/ethical issues and clinical topics. All interns will receive a total minimum of 4 hours per week of supervision.

TELESUPERVISION

The Utah Psychology Internship Consortium uses videoconferencing to provide weekly group supervision to all interns and, on occasion, to provide supplemental individual supervision on an as needed basis. Telesupervision may not account for more than 2 hours of the minimum required 4 total weekly hours of supervision.

We believe that the use of technology in training serves as an opportunity to introduce and acquaint interns with good video-conferencing practices that inform distance learning and telehealth, should they need to provide distance-delivered services in the course of their professional work after completing the Internship. Videoconference supervision will not commence until after UT-PIC Orientation and the intern has become acquainted with the supervisors and peers through in-person interaction. Also, prior to obtaining supervision via videoconference, interns will become familiar with the concept through readings and didactic training provided during UT-PIC Orientation. UT-

PIC recognizes that distance technology is often an important component of rural practice, and in this way, telesupervision is consistent with the overall mission of the internship.

Group supervision in this format is required for all current UT-PIC interns for two (2) hours each week, at a regularly scheduled time. Interns and supervisors meet in a virtual conference room and interact via high-quality real-time transmission of simultaneous video and audio. This supervision group is led by each member of the UT-PIC training faculty, on a rotating basis. UT-PIC places high value on cohesion and socialization of intern cohorts, and virtual meetings via videoconferencing are an effective way to foster connection during the intervals between in-person meetings. UT-PIC recognizes the importance of supervisory relationships. Group supervision is led by each member of the core UT-PIC training faculty on a rotating basis, in order to provide all interns with the opportunity to experience a breadth of supervisory relationships beyond their primary supervisor. Given the geographical distance between training sites, this model allows the interns to form greater connection to the entire training faculty than would be experienced otherwise. It is expected that the foundation for these supervisory relationships will be initially cultivated during UT-PIC's orientation, such that interns will have formed relationships with the entire training faculty prior to engaging in videoconference group supervision. For all clinical cases discussed during group supervision, full professional responsibility remains with the intern clinician's primary supervisor, and any crises or other time-sensitive issues are reported to that supervisor immediately.

As for individual supervision, some sites provide additional supervision of clinical services via distance. These services fall under the supervisor's license and the supervisor maintains clinical responsibility. Telesupervision is utilized in addition to weekly in-person supervision on an as needed basis (e.g. crisis management consultation) when timely in-person supervision is not possible due to travel to remote locations. Interns also have consistent access to other supervisory staff and are expected to utilize those staff in the event that non-scheduled consultation or crisis coverage is required when the primary supervisor for any case is off-site.

All UT-PIC videoconferencing occurs over a secure network. Supervision sessions using this technology are never recorded. All interns are provided with instruction regarding the use of the videoconferencing equipment at the outset of the training year. Technical difficulties that cannot be resolved on site are directed to the appropriate IT personnel at each site.
